Practical clinical biochemistry.

Author(s) : [VARLEY, H.](#)Book : [Practical clinical biochemistry](#). 1954 pp.vii + 551 pp.

Abstract : It is seldom that a reviewer can agree with the "commercial pattern" on the jacket of a technical book, and far too often such advertisements can only give rise to cynical laughter when the book is read. This book can, however, be said to live up to the claim that it should be especially valuable to all who have to carry out biochemical tests, *i.e.*, to clinical pathologists, hospital biochemists, laboratory workers and to workers in university and other laboratories engaged in research with a view to the determination of chemical constituents of body fluids.

The author provides a comprehensive collection of those biochemical tests which are most convenient for the hospital biochemist. In a few cases, more than one method

reasonably have been mentioned, but where the need is strong (*e.g.* in blood analyses for which seven methods are given) he has not hesitated to give all methods and often discusses their intrinsic merits. Summaries of the findings and disease are also included wherever desirable.-D. S. PAPWORTH.

Record Number : 19552200856

Publisher : London: William Heine-mann Medical Books, Ltd.

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Descriptor(s) : advertising, analysis, biochemistry, blood, blood chemistry, blood fluids, constituents, determination, dust, estimation, health

Identifier(s) : blood glucose, glucose in blood
