Abstract:

As a result of decreasing risk premiums on equity investments, alternative investments have increased in desirability as an investment asset with significant history in Europe. In the United States, it is beginning to emerge as a viable investment asset for affluent clients. To guide clients through the process of investing in this asset class, financial advisers should be able to identify investment-grade wines, understand the importance of the cellar log to ensure that wine has been properly stored, be able to work with reputable vendors to avoid counterfeits, and understand various markets for wine, in addition to various ways to invest, typical fee structures, effect on overall portfolios, and the regulatory environment. A financial planner evaluating a stock will likely be looking at factors such as price-earnings, price-book, dividend yield, past earnings growth history, management team background, debt to equity, earnings growth, etc. Wine investment decisions are based on a completely different set of factors, such as: the region where the wine was produced, the winery, when it was produced, vintage rating given by critics, weather patterns when the grapes were grown, how the wine has been stored, condition of the bottles, and price of the wine. Like gold or oil, wine is an alternative investment. It is a hard asset uncorrelated to the equities market with strong historical returns and a low standard deviation. There are increasing opportunities for clients to add wine to their portfolios to decrease volatility and increase the likelihood of strong long-term investment performance.
