

The Nature of Design Practice and Implications for Interaction Design Research

Erik Stolterman

Abstract

The focus of this paper is *interaction design research aimed at supporting interaction design practice*. The main argument is that this kind of interaction design research has not been successful, and that the reason for this is that it has not been guided by a sufficient understanding of the *nature of design practice*. Based on a comparison between the notion of complexity in science and in design, it is argued that science is not the best place to look for appropriate methods on how to approach *design complexity*. Instead, the case is made that interaction design research to produce outcomes aimed at supporting design practice should be grounded in a fundamental understanding of the nature of design practice. Such an understanding can be developed into a well-grounded and rich set of *rigorous* and *disciplined* design techniques, appropriate to the needs and desires of practicing designers.
