[Use of \*Phacelia tanacetifolia\* \(Hydrophyllaceae\) as a resource to enhance hoverfly \(Diptera: Syrphidae\) populations in sweetcorn fields.](#)

Author(s) : [Hickman, J. M.](#) ; [Wratten, S. D.](#)

Author Affiliation : Department of Biology, School of Biological Sciences, Biomedical Sciences Building, University of Southampton, SO9 3TU, UK.

Conference paper; Journal article : [Bulletin OILB/SROP](#) 1994 Vol.17 No.4 pp.156-161

Abstract : *Phacelia tanacetifolia* was drilled in the margins of 3 maize fields in

during 1991. Numbers of syrphids, oviposition rates and aphid densities were compared in treated and untreated fields. The main aphidophagous species were *Episyrphus balteatus* and *Metasyrphus corollae* [*Eupeodes corollae*]. Significantly more aphids were captured in fields with *P. tanacetifolia*, while more aphids were found in untreated fields. This paper was presented at a meeting of the IOBC/WPRS working group on biological control in cereal crops held in Le Rheu, France, on 30 November-2 December 1991.

Record Number : 19951105721

Indexing terms for this abstract:

Organism descriptor(s) : arthropods, Diptera, *Episyrphus balteatus*, *Eupeodes corollae*, *Phacelia tanacetifolia*, Syrphidae, *Zea mays*

Descriptor(s) : agricultural entomology, beneficial arthropods, beneficial insects, beneficial organisms, biology, cereals, fields, maize, natural enemies, predators

Identifier(s) : beneficial species, Boraginales, Britain, corn, Integrated control in cereals, United Kingdom

Geographical Location(s) : UK

Broader term(s) : insects, Hexapoda, arthropods, invertebrates, animals, eukaryotes, Syrphidae, Diptera, *Eupeodes*, *Phacelia*, Hydrophyllaceae, Solanales, eudicots, angiosperms, Spermatophyta, plants, *Zea*, Poaceae, Poales, commelinids, monocotyledons, Britain, Western Europe, Europe, Commonwealth of Nations, Developed Countries, European Countries, OECD Countries
