[The physiological basis of medical practice.](#)

Author(s) : [BEST, C. H.](#) ; [TAYLOR, N. B.](#)

Book : [The physiological basis of medical practice.](#) 1939 No.2 pp.xvi + 1872 pp.

Abstract : Until the first edition of this book appeared in 1937 it is probable that teachers of physiology expected ever again to see an attempt to write a complete textbook on the subject. This second edition is even more complete than the first and has an additional section on the special senses.

The authors deserve unstinted praise for a magnificent achievement. They are giving the medical student all the biophysics, biochemistry and true physiology that can be expected to learn in his pre-clinical years. In addition, special attention

application of physiological knowledge to the diagnosis and treatment of disease admirably done, and at least "points a moral and adorns a tale".

If now pathologists and clinicians would only include in their textbooks compact sections on the physiological principles underlying their procedures we should see the way to bridging the unfortunate gap between clinical and pre-clinical studies. The book is expensive, and inevitably portions rapidly become out-of-date. I hoped that authors and publishers will consider not frequent publication of the book but cheap annual supplements, say over a period of five years, giving the reader the latest advances in knowledge. Students, buying the book in their pre-clinical years should be encouraged to buy such cheap supplements throughout their clinical studies to keep their knowledge up to date.

There is one further aspect. Such a complete and excellent text on physiology is not only by medical students but also by students of biology, the majority of whom will become school teachers. Too long; has school biology been elementary biology and zoological morphology. Everything should be done to train school teachers so that their pupils may benefit. The text of this book, shorn of the more detailed aspects, would be most suitable for such non-medical students. R. C. Garry

Record Number : 19401403939

Publisher : BailHere, Tindall and Cox, London

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Organism descriptor(s) : man

Descriptor(s) : diagnosis, physiology, research, students, supplements, therapy

Identifier(s) : studies, therapeutics

Broader term(s) : Homo, Hominidae, primates, mammals, vertebrates, Chordata, eukaryotes
