 **Statistics in research.**Author(s) : [OSTLE, B.](#)Book : [Statistics in research.](#) 1963 No.2nd Ed pp.xv + 585 pp.

Abstract : So many text books on statistics have been published recently that an assessment of their relative merits is a matter of some difficulty. Professor OSTLE however stands out by virtue of his occupying the half-way situation between a fundamental treatise intelligible only to mathematicians and the list of recipes for standardized situations, from which theory is studiously eliminated. The author gives an unusually clear presentation of fundamental definitions and theorems. As a book is primarily intended for engineers, it can profitably be used by biologists as a reference book. The chapters comprising the major part of the book deal with, fundamental mathematical concepts, probability, descriptive statistics,

distributions, statistical inference and testing of hypotheses, regression, co simpler experimental designs, and covariance analysis. The three final chap particular interest. The first is on distribution-free methods and includes sig run test, the Kolmogor-Smirnov test and the median test; the second is on : quality control; and the third on range-tests, evolutionary operation, toleran system reliability. Statistical tables are assembled in an appendix.

Record Number : 19631603964

Publisher : The Iowa State University Press, Ames.

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Descriptor(s) : experimental design, quality controls, statistical analysis, statistics

Identifier(s) : definitions, plot design, quality assurance, statistical methods
