Abstract

This book is unique in presenting a critical historical and contemporary analysis of money and its policy implications from a green and feminist perspective. It includes contributions by economists with a very favourable review in *The Ecologist*. The author's contribution to this book was substantial as the main author of five chapters (including the introduction and conclusion) and joint author of two others with Richard Smith. She has made many presentations based on the book in the UK and abroad, including at the International Society for Ecological Economics in Delhi.
