From snow-capped peaks to glimmering salt playas, from red-rock canyons to mountain lakes and streams, the Intermountain region contains some of the most spectacular and varied landscapes in North America, if not the world. It is a land of extremes of climate, geology, and flora. It is home to the oldest living organisms, the Great Basin bristlecone pine (*Pinus longaeva*), individual trees of which can be over 4000 years old. Conversely, some distinctive hybrid populations of *Atriplex* that some people consider to be incipient species have formed recently (perhaps within the last 50 years) and represent “evolution in action” (Stutz, 1984). The Intermountain region contains some of the most charming wildflowers (*Penstemon*, *Calochortus*, *Mimulus*, *Aquilegia*, among many others) as well as some of the most persistent invasive introduced weeds (e.g., *Bromus tectorum*, or cheat...
