Meanings Beyond Words: Psychoanalytic Perceptions of Silence, Communication, Happiness, Sexual Love and Death

Stanley L. Olinick

It is hardly a novelty for the psychoanalyst to reflect on silence, whether his own or his patient's revelation to hear that there are many varieties of silence—as many as there are adjectives suitable to describe them. But the silence I propose to explore with you is not one that the analyst often experiences in the course of his work. Silences within the psychoanalytic context are usually those that arise out of a state that is both conflicted and painful. Even periods of boredom and bored silence are couched in a fullness that is both attended and perceived, often latently explosive. When with silence there is temporarily peace and comes quickly with it anticipation of the next travail.

Life outside the consulting room is not so unrelentingly intense, and I venture to speak to you of a silence that more often follows upon certain extra-analytic, completed, intimate, and spoken communication. Do not be confused with the bored surfeit that accompanies some dialogues, lectures, and sermons; this silence is seldom descriptively detailed, though it is often enough referred to with such adjectives as 'understanding', 'comfortable', or 'deep'. Because its advent depends upon the subjective experience of the participants, its detailed description sometimes relies on a rather dense and equivocal prose.

I am proposing that we explore an area of considerable ambiguity. I refer to a type of oral communication that is ubiquitous and is intended for affective contact between two or more people, rather than for transmitting cognitive information; it does not rely entirely upon secondary process for the attaining of its goal.
