## Nematode parasites of domestic animals and man.

Author(s) : [Levine, N. D.](#)

Author Affiliation : Coll. Vet. Med., Urbana, Illinois 61801, USA.

Book : [Nematode parasites of domestic animals and man](#). 1980 No.2nd edition ref.many fig. &

Abstract : In the Preface to this, the second edition, the author bewails the passage of time during the 9 years between the editions, vast numbers of papers have appeared "...some of them have simply plowed old ground ... and relatively little radical new information has appeared". However, in this edition, there is no mention of "anthelmintics go out of date too fast". Inevitably, the reader who lives in a t

zone will be most interested in trichostrongyles and these are fairly well covered in 90 pages, though after studying this section carefully the reader will not have much knowledge about disease caused by these worms. He will, however, be able to identify the worms and will have a fair idea of their pathogenicity. In other words, the book is suitable for the lecturer and his students but would not be useful to veterinary surgeons. It covers only nematodes and not other helminths, because there are too many of them". To those who work in tropical countries, it will be particularly useful. Line drawings are good and the writing is acceptable.

AD ABSTRACT: This textbook has been completely rewritten to take account of new information that has been acquired since the first edition was published. For a review, see Hm/A 39, 1255]. However, the format is exactly as before. One change is that the sections on drug treatment have been omitted "because the field is changing so rapidly that anthelmintics go out of date too fast". Each of the 17 chapters has a bibliography but, "in the interest of brevity and economy", papers dated earlier than 1977 are not listed, even when mentioned in the text. The most recent papers in the bibliography appear to be dated 1977.
