Abstract

A brief narrative description of the journal article, document, or other work. This article describes a family literacy program whose homes are filled with books, whose parents read to their children, and whose parents who understand the reading process have higher levels of reading skills than children who do not have such skills before entering school. This article describes a family literacy program funded by a state university, the state office of education, and a school district. The project integrates an early childhood literacy program on education for parents who may not know how to create a literacy-rich home. The objectives of the program were: (1) to engage parents in reading, discussing, and participating in reading related activities; (2) to emphasize parent education by providing explicit instruction on how to read and interact with children during reading. The authors review the sessions' contents, and offer tips for implementing family literacy programs, including transportation, child care, parent activities, parent-child activities, interpreters, and funding.
