ABSTRACT

The American multinational company Google is one of the most important businesses in the new economy, thanks to its innovation has positioned itself as a leader in the Internet environment worldwide. One of its main products is Google Search, which has been in the public eye, because authorities in antitrust considered that search machine infringes the antitrust legal system. The company Google has faced indictments for this reason countries like the US and the EU, but in both cases it is considered that the authorities responsible for research has not given clear and sound criteria to determine the guilt or innocence of the digital enterprise, based on the actual behavior of competition in the markets for electronic commerce, which belong to the new

Economy, so this paper presents a brief description of both cases and proposals of the key aspects that investigations by the authorities in the field should take.

RESUMEN

La multinacional estadounidense Google, es uno de los negocios más importantes de la nueva economía, gracias a su innovación se ha posicionado como un líder en el entorno Web en todo el mundo. Uno de sus principales productos es Google Search, el cual ha estado en el ojo público, debido a que autoridades en defensa de la competencia han considerado que la máquina de búsquedas vulnera el sistema legal de defensa de la competencia. La empresa Google ha enfrentado acusaciones formales por esta razón en Estados Unidos y la Unión Europea, pero en ambos casos se considera que las autoridades encargadas de las investigaciones no han emitido criterios claros y sólidos para determinar la culpabilidad o inocencia de la empresa digital, basado en el comportamiento real de la competencia en los mercados de comercio electrónico, que pertenecen a la Nueva Economía, por lo que este trabajo expone una breve descripción de ambos casos y las propuestas de los aspectos claves que las investigaciones de las autoridades en la materia deben tomar.
