[Aquatic insect ecology. 1. Ecology and habitat.](#)

Author(s) : [Ward, J. V.](#)

Author Affiliation : Department of Biology, Colorado State University, Fort Collins

Book : [Aquatic insect ecology. 1. Ecology and habitat.](#) 1992 pp.xi + 438 pp. ref.6

Abstract : This is the first volume of a work which aims to provide a comprehensive treatment of the ecology of aquatic insects, and is intended for use as a text at the undergraduate and beginning graduate levels and as a reference work by those working in aquatic habitats and their faunas. It begins with a brief overview of the insect fauna of aquatic representatives. This is followed by evolutionary considerations, historical occurrences (lentic, lotic, marine, saline) of aquatic insect communities (pleu

nekton, benthos, madicoles, hyporheos), and finally the relationship of aquatic organisms to environmental variables (temperature, substrate, flow and water level, suspended sediment, light, oxygen and other chemical factors). An index and an extensive bibliography (which has a strong European/North American emphasis) are provided.

Indexing terms for this abstract:

Organism descriptor(s) : insects

Descriptor(s) : aquatic animals, aquatic arthropods, Aquatic communities, aquatic invertebrates, aquatic organisms, Community ecology, ecology, Environmental habitats, Limnology

Identifier(s) : aquatic species

Broader term(s) : Hexapoda, arthropods, invertebrates, animals, eukaryotes
