Description

Arkansas has beautiful forest lands totaling 18.3 million acres. In fact, Arkansas is over 50 percent forested, which is much higher than the United States average of 21 percent (fig. 1). Many of Arkansas' forested areas are timberlands or commercial forests, meaning that each acre can produce a minimum of 20 ft³ of wood volume per year. Lower percentages were noted for woodland forests (other than timberlands) in Arkansas compared with the United States averages. These lands

have provided Arkansans with employment, areas for recreation, scenic beauty, and opportunities for investments.
