### Abstract

This study examined the importance of morphological awareness in Korean“English biliteracy acquisition. English is an opaque orthographic system, in which letters and sounds have indirect correspondences. Korean Hangul, on the other hand, is a transparent orthographic system where there are direct letter-sound correspondences. Sixty-five children from Grades 2 to 4 were tested on a set of comparable Korean and English tasks tapping into oral vocabulary, phonemic awareness, morphological awareness, real word reading, and passage reading comprehension. Results showed that morphological awareness explained a significant amount of variance in word reading and reading comprehension within both Korean Hangul and English, suggesting that morphological awareness is important not only in an opaque orthography but also in a transparent orthography. Furthermore, morphological awareness in one language uniquely predicted a significant amount of variance in reading real words in the other

language, suggesting that morphological awareness facilitates word reading across different orthographies.
