## Abstract

This turtle identification guide is based on several years of market literature search, finally settling on THE 126 species and subspecies commonly traded in China. The most unique feature of this book is that consistent body color and external features are used, and the identification keys are illustrated with color photographs. In case of this book by law enforcement officials, the distinguishing features in detail for every species and subspecies. This allows easy and accurate identification by enforcement officials who are not turtle experts, cross-checking the identification of the turtle species in question.
