Diptera of Patagonia and South Chile based mainly on Material in the British Museum (Natural History). Part II-Fase. 4. Ceratopogonidae.

Author(s) : [INGRAM, A.](#); [MACFIE, J. W. S.](#)

Book : [Diptera of Patagonia and South Chile based mainly on Material in the British Museum \(Natural History\). Part II-Fase. 4. Ceratopogonidae.](#) 1931 pp.155-232 pp.

Abstract : The collection consists of 297 specimens. The common genera with wide distribution, *Forcipomyia*, *Atrichopogon*, *Dasyhelea*, *Stilobezzia* and *Pa...*

well represented, but it is noteworthy that there are no examples of the genus *Bezzia*. The apparent absence of *Culicoides* is of special interest on account of its blood-sucking habits. Several new genera and species are described, and a number of species from other localities in South America are included in an appendix.

Record Number : 19321000027

Publisher : London, Brit. Mus. (Nat. Hist.)

Language of text : not specified

Language of summary : not specified

Indexing terms for this abstract:

Organism descriptor(s) : Atrichopogon, Bezzia, Ceratopogonidae, Culicoides, Diptera, Forcipomyia, Palpomyia, Stilobezzia

Descriptor(s) : new genus, taxonomy

Identifier(s) : systematics

Geographical Location(s) : America, Argentina, Chile, South America

Broader term(s) : Ceratopogonidae, Diptera, insects, Hexapoda, arthropods, invertebrates, animals, eukaryotes, Developing Countries, Latin America, America, South American Countries, Andean Group, APEC countries
