Time Series Forecasting

[-] Abstract and Keywords

This chapter deals with time domain statistical models applications. It covers fundamental concepts, stationary models, intervention and outlier models, transfer function series models, and their applications. We discuss the identification, parameter estimation, diagnostic checks autoregressive conditional heteroscedasticity model, generalized autoregressive conditional heteroscedasticity model, and unit roots and cointegration.

Keywords: [Autoregressive model](#), [moving average model](#), [autoregressive moving average model](#), [intervention](#), [outlier](#), [transfer function](#), [generalized autoregressive](#)
