General Description

Macoun's Gentian is a glabrous annual with erect, simple to few-branched stems that are 5-50 cm long and lance-shaped with blunt tips. The opposite stem leaves are narrower with long-stalked flower occurs at the stem tip, while others may arise from the upper leaf axils. The flower is tubular and has 4 pointed lobes and small, white bumps at the base. The deep blue, tubular corolla is broad, spreading, fringed lobes. The 4 stamens have hairs at midlength. The fruit is a stalked, 1-seeded capsule that is 12-25 mm long.

Lesica (2012) splits out of this species *Gentianopsis detonsa*, which is diagnosed by the presence of the calyx.

Phenology

Flowering in August, fruiting in early September.

Diagnostic Characteristics

Gentianopsis dentosa is similar but lacks the small white bumps at the base of the calyx.

Species Range

Present

Range Comments

Yukon to Quebec, south to BC, MT, and ND. Peripheral.

Observations in Montana Natural Heritage Program Database

Relative Density

Recency

(Observations spanning multiple months or years are excluded from time charts)

Habitat

Wet, organic soil of calcareous fens in the valley and foothill zones.

Ecological Systems Associated with this Species

Commonly Associated with these Ecological Systems

Wetland and Riparian Systems

Rocky Mountain Subalpine-Montane Fen
