 **Plant hybridization before Mendel.**Author(s) : [ROBERTS, H. F.](#)Book : [Plant hybridization before Mendel](#). 1929 pp.xiv + 374 pp.

Abstract : This valuable study deals with the contributions made to the knowledge of plant breeding in its widest aspects, from the cultivation of the date palm by the Assyrians down to 1900 when Mendel's work was rediscovered and its fundamental significance recognized almost simultaneously by De Vries, Correns and von Tschermak. The main events are treated in chronological order and in considerable detail. Quotations, translated where necessary, are freely given.

To many readers for whom the science of genetics begins with Mendel it will be interesting to discover how much and how accurate was the knowledge before the present laws were formulated and how nearly Mendel's results were anticipated by r

The work of Mendel himself is very fully treated and the book concludes with contribution made by Bateson to the discovery of Mendel's investigations.

Record Number : 19341601173

Publisher : Humphrey Milford, Oxford University Press, London

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Organism descriptor(s) : Phoenix dactylifera

Descriptor(s) : breeding methods, cultivation, dates, genetics, hybridization, law, regulations

Identifier(s) : legal aspects, legal principles, rules

Broader term(s) : Phoenix, Arecaceae, Arecales, commelinids, monocotyledons, Spermatophyta, plants, eukaryotes
