AbstractAbstract

[en] This book is directed toward those working in engineering electromagnetics, presenting material on a fairly sophisticated mathematical level with methods which are discussed being the results of recent developments in electromagnetic field analysis. The primary mode of analysis, discussed in the first two chapters, is complex vectors and dynamics. Chapters on standard topics of electromagnetic field analysis, a chapter on field transformations, and a chapter on exact image theory complete the book

Primary Subject

[CLASSICAL AND QUANTUM MECHANICS, GENERAL PHYSICS \(G1300\)](#)

Secondary Subject

[NUCLEAR PHYSICS AND RADIATION PHYSICS \(G3000\)](#)
