On the Causes of broken Wings of the House Fly.

Author(s) : [PATTERSON, R. S.](#)

Journal article : [Journal of Economic Entomology](#) 1957 Vol.50 No.1 pp.104-105 p

Abstract : The occurrence of broken wings among caged house-flies (*Musca domestica* L.) has often been noted. The damage is largely confined to males. Sometimes 50 per cent. of the males in a culture two weeks old have the wings torn to some extent. Observations on flies confined in cages too small to allow of mating and on flies in groups of one sex, which attempted to copulate with individuals of their own sex, were repulsed, together with negative observations on the effect of overcrowding and changes in diet, confirmed the theory that the tearing is caused by thrusts of the wings against the sides of the cage.

metathoracic legs of females resisting mating attempts. Females in the labo
to be fertilized twice, about three and 7-10 days after they emerge. Further
the males are resisted. Males with torn wings are found in the field as well a
laboratory.
