Quantum Physics

Bibliographic guide to the foundations of quantum mechanics and quantum information

[Adan Cabello](#)

(Submitted on 18 Dec 2000 (v1), last revised 15 Nov 2004 (this version, v12))

This is a collection of references (papers, books, preprints, book reviews, Ph. D. thesis, patents, web sites, etc.), sorted alphabetically and (some of them) classified by subject, on foundations of quantum mechanics and quantum information. Specifically, it covers hidden variables ("no-go" theorems, experiments), interpretations of quantum mechanics, entanglement, quantum effects (quantum Zeno effect, quantum erasure, "interaction-free" measurements, quantum "non-demolition" measurements), quantum information (cryptography, cloning, dense coding, teleportation), and quantum computation.

Comments: REVTex4, 462 pages, 10344 references, updated 15 November 2004. Latest version:
