## Abstract

Current knowledge about the solar system is reviewed, with particular emphasis on the results of recent space exploration. Among the many topics discussed are the sun, magnetospheres and the interplanetary medium, the surfaces of the terrestrial bodies, the moon, Mars, asteroids, Jupiter and Saturn, planetary rings, the Galilean satellites, Titan, the outer solar system, comets, and meteorites. Particular attention is given to the Voyager 1 and 2 flybys of Jupiter and Saturn. The work includes many illustrative photographs of the celestial bodies discussed.
