English abstract

Discusses some of the more recent members of the optical media family, some of which have already will do so in the very near future. Summarizes the uses of, and prospects for, multimedia optical and other information services, such as museums. Focuses on: (1) the present state of optical memory for multimedia; (2) applications in, and relevant ongoing developments for, library and information position of the information community concerning the new technology. Overviews applications in museums, and galleries, and research institutions. Considers problems and issues for libraries and for further research.

Item type: Journal article (Paginated)

Keywords: interactive multimedia, multimedia system, hypermedia, optical disc technology, information retrieval, libraries, museums, galleries, archives, electronic publishing, information
