

## Eleven More Events that Have Shaped Sacramento's Human Landscape Datel, Robin

**URI:** <http://hdl.handle.net/10211.3/203088>

**Date:** 2018

### Abstract:

An earlier article in *The California Geographer* (Dilsaver, Wyckoff, and Preston 2000) identified fifteen events that triggered significant changes to California's human landscape. Building on that base, this article focuses on the four-county Sacramento region and adds eleven more events that have shaped the Sacramento area's human landscape. The eleven events involve race-based slavery, the state capital, chain businesses, regional public higher education, the expanding medical sector, the U.S. immigration system, historic deindustrialization, restaurants, and human-driven drought. Each event has left its mark on the Sacramento area, as well as more widely across the state. Many of the events reveal important institutional, as well as economic and technological, aspects of Sacramento and California. These events, and the fifteen earlier identified, reveal the multi-scalar and often conflicting values and forces that have shaped human landscapes and related spatial patterns.
