Conference Title : [XVII Congreso de la Asociación Latinoamericana de Malezas \(XVII Congreso Iberoamericano de Ciencia de las Malezas, IV Congreso Nacional de Ciencia de las Malezas, Matanzas, Cuba, 8 al 11 de noviembre del 2005\)](#).

Abstract : Integrated weed management had the objective to determine by

combination of methods, weed control in established tall creole coconut grove methodology consisted in evaluating weed control by means of the combination of manual, chemical and live mulch methods. Trial layout was randomized block with 3 replicates and 8 treatments, for a total of 32 plants. Plot size was 16 m<sup>2</sup>, one plant per treatment. Weeds were selected at random in 3 different sites, later dissected, pressed and placed in the sun in order to be taxonomically identified. The effectiveness of the treatments on weeds was evaluated monthly until 90 days. Treatments applied were: T1 diuron 14 g/pl+paraquat 14 cc/pl, T2 diuron 7 g/pl+paraquat 7 cc/pl, T3 imazapyr 7 cc/pl+paraquat 7 cc/pl, T4 oxifluorfen 7 cc/pl+paraquat 7 cc/pl, T5 diuron 7 g/pl+paraquat 7 cc/pl, T6 manual weeding with machete, T7 manual weeding check. For the second application treatments applied were: T1 paraquat 7 cc/pl, T2 live mulch, T3 paraquat 14 cc/pl+diquat 7 cc/pl, T4 paraquat 7 cc/pl+diquat 7 cc/pl, T5 manual weeding with machete, T6 manual weeding, and T7 check. The most effective treatment turned out to be where the mixtures of diuron+paraquat, diuron+paraquat+diquat and imazapyr+diquat were made, and most prevailing weed was *Sergania* sp. (Guichere). The manual, chemical and live mulch methods were effective when they combined for weed control.
