### Abstract

Poor science achievement has been an educational issue for students with disabilities. Research suggests that students with disabilities have traditionally fared worse. Research suggests that students with disabilities may respond better to instruction using an inquiry-based approach than traditional textbook instruction when measuring science achievement.

measures. The researchers report achievement data on the Io a target school district for students Individualized Education I IEP students, as well as students with IEP's at the state level. U inquiry approach to science instruction called the Science Wri researchers report data supporting its impact on student achi suggest that the SWH may contribute to science achievement
