Metabolic and endocrine physiology. An introductory text

Author(s) : TEPPERMAN, J.

Book : Metabolic and endocrine physiology. An introductory text. 1968 No.Edn 2

Abstract : It is no doubt a confession of failure of some kind to say that the this book was not seen and reviewed by *Nutrition Abstracts and Reviews*. T no doubt that it has an important place in the literature of nutrition and nutr rejoice to have the studies it describes referred to as physiological and neit biochemical nor endocrinological. I rejoice in the all too short historical sumrn happy to say that I have seldom read a textbook with more enjoyment. I do whether specialist biochemists or endocrinologists will find anything to critic

found nothing in the passages relating to the physiological processes with which I was acquainted. The style is clear, simple and always intelligible. Occasional flash passages, such as the description of the remodelling of bone as "business-as-usual during alterations". The author is deliberately selective and not afraid to say "I don't know". The student who reads it should not omit to read both introductions. I will find the rest as rewarding as I have done. I. Leitch.

Record Number : 19691401898

Publisher : Year Book Medical Publishers, Inc.

Location of publication : 35 E. Wacker Drive, Chicago, Ill.

Country of publication : USA

Language of text : English

Language of summary : English
